Beautiful Gardens from

*Paradise Parcels*

**24 MIXED VIOLA (TROPICANA)**

Outstanding garden performance with this variety containing some of the loveliest colours available in violas. A combination of straight colours and bicoloured flowers with "whisker" markings.

Height: 15cm (6")

Spread : 15" (6")

Position: Full or part sun

Beautiful Gardens from

*Paradise Parcels*

**24 PANSY F1 MIXED**

This hardy, free-flowing plant will enhance any garden with its large petals of many vivid colours. Suitable for beds, tubs, hanging baskets and containers, this plant will survive through the winter months.

Height: 15-20cms (6-8"). Spread: 15-20cms (6-8")

Position: Sun or partial shade. Remove dead flower heads to promote further flowering.

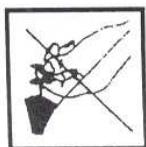

### HORTICULTURAL INSTRUCTIONS

Dear Gardener

We are continually striving to provide good quality plants and an efficient service. The horticultural instructions are written to help you with the care and maintenance of your plants and we wish you every success with their cultivation.

All our plants are grown to the highest specifications but if you should be dissatisfied in any way, please send us an explanatory letter within 14 days of receipt of goods. We will then offer you a replacement or a full refund.

If upon opening your package there is a little yellowing or a small quantity of compost has come away, there is no need for concern providing the plants are grown correctly.

The plants should be potted on immediately but if this is not possible remove them from the transit box, water and place them in a warm light place. Before removing plants from their trays ensure the compost is moist to aid easy removal. Remove your plugs from their punnet by pushing them out from below with a dibber or the blunt end of a pencil. **DO NOT PULL ON THE STEMS OR LEAVES.** Plants can be potted on individually in small pots approximately 7.6cm (3 inch) or planted into seed trays 16-20 Plants per standard tray and grown on for 3 / 4 weeks prior to transplanting into your garden. We recommend the use of good proprietary peat based compost which should be kept moist but not waterlogged. The plants should be kept in a light position either in a greenhouse or on a windowsill but not in direct sunlight. Ideally, these should be kept in a temperature not exceeding 10°C/50°C night and day, and free from draughts. The plants should be kept inside for at least 2 weeks. A liquid feed of any proprietary brand will provide the plants with a boost to overcome the climate changes of planting out.
