Background as to how created

Greg – just a background to assist you in why the graphic looks as it does.

The cards are created by scanning the photographs. They are then arranged as they are needed in a layout format and then a text box added to sit adjacent to the top right photograph with text added.

This is then 'saved as' a photograph** for insertion as follows.

A table box is then formed to create the outer edging of which the then saved photograph of above is inserted. This can cause the minor problems of mis-aligning as you will see to the bottom left.

The entire document is then 'saved as' a photograph and then re-sized according to your requirements.

I have worked on this as just one photograph, but I could re-size the originally saved photograph**, re-size then re-work the table to suit, but will take time of which I have little of this afternoon I am afraid. I could re-work this evening/tomorrow if required.

Tina
